

*“The **key** to effectively managing data in **healthcare** today.”*

cifraHC

The most **secure** communication environment to **store, share and collaborate** sensitive patient data in healthcare.

Security is everything

- How truly protected is your patient data?
- Did you know that the last email you sent likely passed through multiple servers? With a copy made each time?
- What if you could securely “chat” instantly with other members of your healthcare team?
- Ever wished you could have responded to a request for information more quickly but were concerned about remaining HIPAA/ARRA compliant?

Let **cifraHC** take the work and the worry out of securing your business communications.

Secure eHealth, LLC is a secure messaging and data delivery solutions provider whose mission is to encourage collaborative healthcare delivery by creating platforms where healthcare practitioners, ancillary providers, medical facilities and patients can freely share information safely and securely.

www.securehealth.com

Just one data breach could be costly, if not fatal, to your organization. Can you afford not to use **cifraHC** to protect your data?

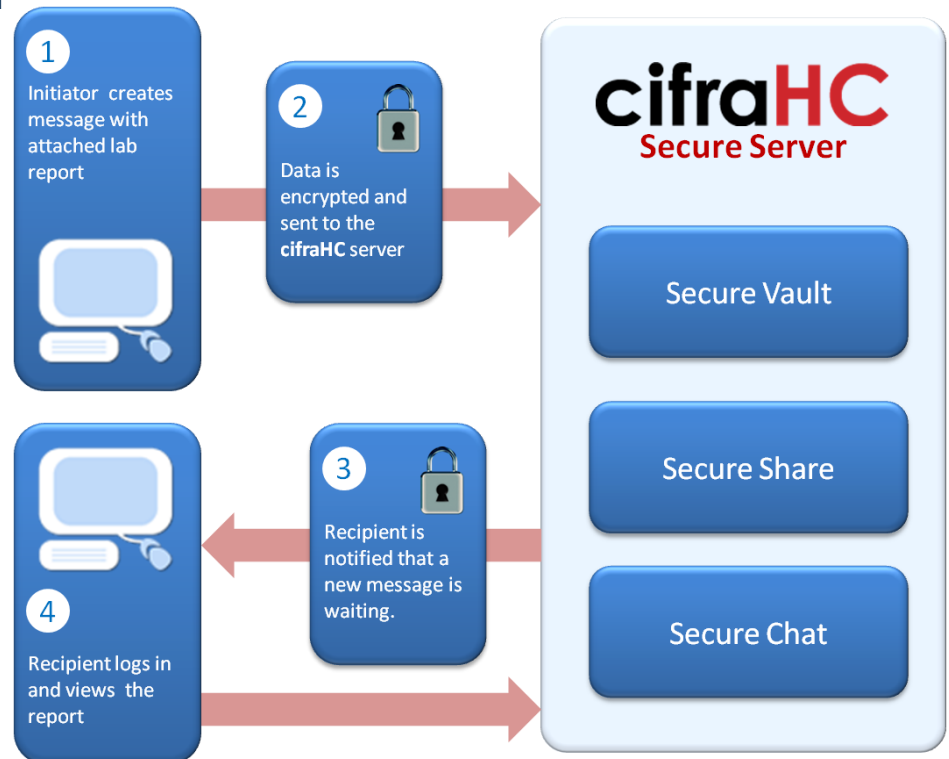

cifraHC, a Secure eHealth solution, provides the most secure healthcare communications tool available.

“Security is one of the most important topics in healthcare IT today, and yet there are surprisingly few solutions that address it adequately. Secure eHealth has a real opportunity to bring needed technology to bear in the healthcare space where it is so desperately lacking.”

How we excel

- **cifraHC** was developed to protect electronic assets while still allowing for collaboration in a shared environment.
- Sleep well knowing all of your patient data is stored in a HIPAA compliant encrypted vault.
- Mitigate risk by ensuring no proprietary data is shared outside your work group.
- Relationship management tools provide simple, precise control over individuals and contact groups.
- Integrate **cifraHC** with your existing systems to enhance communication and streamline workflow.

how **cifraHC** works to protect your data
