

“The *key* to effectively managing data in *healthcare* today.”

securesuiteHC

Secure Connected Solutions

Feel Free To Collaborate

Security is everything

- Are you making critical decisions with real-time data?
- Are you driving your important clinical data or is it driving you?
- Is responsiveness an obstacle to optimizing your patient satisfaction level?
- Ever wished you could have responded to a request for information more quickly but were concerned about remaining HIPAA/ARRA compliant?
- Are you searching for a way to integrate intelligent *mobile* notifications with your existing EHR solution?

Let **securesuiteHC** take the work and the worry out of your patient care.

Secure eHealth, LLC is a secure messaging and data delivery solutions provider whose mission is to encourage collaborative healthcare delivery by creating platforms where healthcare practitioners, ancillary providers, medical facilities and patients can freely share information safely and securely.

www.securehealth.com

Just one data breach could be costly, if not fatal, to your organization. Can you afford not to use SecureSuiteHC to protect your data?

Secure eHealth solutions work in tandem or individually to provide the most secure healthcare communications tool available.

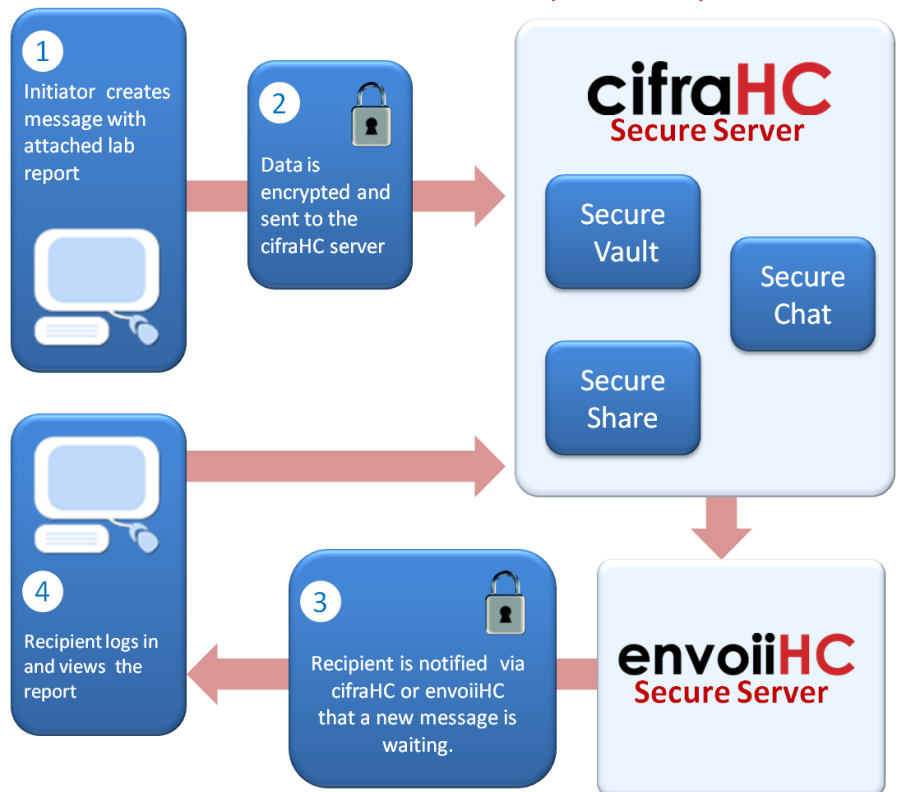

“Security is one of the most important topics in healthcare IT today, and yet there are surprisingly few solutions that address it adequately. Secure eHealth has a real opportunity to bring needed technology to bear in the healthcare space where it is so desperately lacking.”

How we excel

- Make quick decisions based on real-time information securely pushed out to you on your mobile unit.
- Stay in HIPAA compliance by keeping your patient data in a single “closed” secured environment.
- Sleep well knowing all of your patient data is stored in a HIPAA compliant encrypted vault.
- Mix and match your communication environment.
- Optimize patient satisfaction by quickly responding to urgent clinical notifications.
- Integrate **securesuiteHC** with your existing systems to enhance communication and streamline workflow.
